

NYQUI TOTEM

ABSORPTION

PRODUCT CHARACTERISTICS

Many offices today are designed as Open Spaces. Properly designed Open Spaces provide a friendly and dynamic workplace. However, the lack of proper acoustic panels causes a lot of reverberation and noise propagation. To prevent this, we have developed NyquiTotem - a mobile acoustic panel with high efficiency and a wide range of applications. The cylindrical totem with a diameter of 40 cm consists of two types of absorbent material with different densities. The outer layer is an acoustic felt that is available in more than 100 colors. The 40 cm diameter cylinder-shaped totem is made of two types of absorbent material of varying density. The outer layer is an acoustic felt available in more than 100 colors. The whole is set on a stable, lacquered base.

The cylindrical shape and dense material with the highest sound absorption coefficient ($\alpha_{in} \geq 1$) enables significantly reduced reverberation and improved speech intelligibility. The ultra-lightweight design allows you to freely move the totems anywhere. If needed, they can be placed in a conference room, meeting room or larger open space. Because of its wide range of uses, the NyquiTotem can also function as a bass trap in movie theatres, clubs or recording studios.

MATERIALS

NyquiTotem is made from compressed mineral wool of higher density and a granulated open-cell acoustic foam. From the outside, the panel is upholstered with an acoustic felt. The base is made of lacquered, MDF with fire grade B, s2-d0.

PRODUCT PROPERTIES

	ABSORPTION COEFFICIENT	≥ 1
	ABSORPTION CLASS	A
