

NYQUI TOTEM PLANT

ABSORPTION

PRODUCT CHARACTERISTICS

The key in designing acoustics is the ability to fit them into the interior space in a way that is both effective and discreet. Acoustic pots are the ideal solution here.

Original, available in many sizes and colors, they are perfect for interiors where unique design and good acoustics are important. Elegant and sleek, they effectively bring the room to life. With their shape, they visually enlarge the space and seemingly increase the volume of the plants. Environmentally friendly - almost half of the materials used are recycled!

Using dense sound absorbing material, they effectively absorb sound over a wide range, making them ideal for offices, lounges and conference rooms

They effectively reduce echo while improving speech intelligibility. Already two pots, placed in the right places, significantly increase the comfort of staying indoors.

Available in a wide range of sizes, colours and configurations.

PRODUCT PROPERTIES

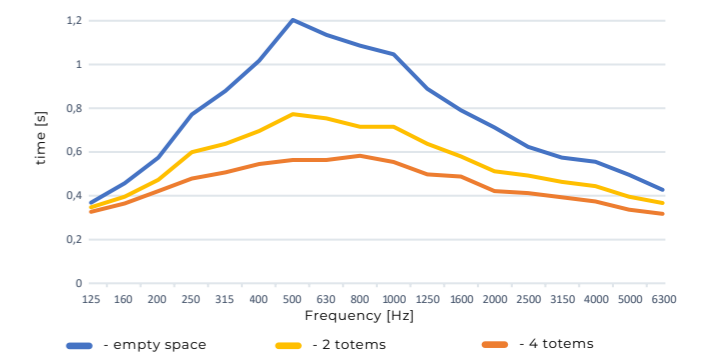

α_w	ABSORPTION COEFFICIENT	≥ 1
	ABSORPTION CLASS	A
	ACTIVITY	broadband
	FINISH	acoustic felt
	ASSEMBLY	free standing panel
	COLOURS	large selection
	POT INSERTION	yes
	ECOLOGICAL PRODUCT	yes

MATERIALS

NyquiTotem Plant are made entirely of sound absorbing materials. They consist of a solid MDF base covered with felt and filled with rock wool with a high sound absorption coefficient. Furthermore, there is an additional absorbent layer in the middle of the core - all materials were not used in production and no piece of material is wasted.12

REVERBERATION TIME

For 12 m² area
